

SIVA K

Senior Backend Developer | Python & Django / DRF

Bangalore, India • +91 9843451831 • sivakandhasami01@gmail.com
linkedin.com/in/siva-k • github.com/sivasiva2000

PROFESSIONAL SUMMARY

Backend-focused Python developer building secure, scalable web services with Django and Django REST Framework. Experienced designing REST APIs, modeling relational data in MySQL, implementing JWT authentication and role-based access control, and shipping through Dockerized CI/CD pipelines. Built and operated a full-stack identity-governance platform end to end, integrating AWS, Azure, Active Directory, and Microsoft 365. Recognized with an Okta bug bounty.

TECHNICAL SKILLS

Languages: Python, JavaScript

Backend: Django, Django REST Framework (DRF), REST API design, ORM, Serializers, Middleware, Signals, JWT Authentication, RBAC

Databases: MySQL (schema design, relational modeling, query optimization)

Cloud & Integrations: AWS, Azure, Active Directory, Microsoft 365 (connector-based integrations)

DevOps & Tooling: Docker, CI/CD pipelines, Git, GitHub, Linux

Frontend: React

Practices: REST API security, audit logging & compliance, event-driven / scheduled jobs, version-controlled collaborative workflows

PROFESSIONAL EXPERIENCE

Python Full Stack Developer (Backend-focused)

Jan 2024 – Present

I Am Logic

Bangalore, India

- Designed and built backend services and REST APIs in Django and Django REST Framework for a full-stack identity governance (IGA) platform, owning data models, serializers, views, and request/response flows.
- Modeled relational schemas in MySQL for users, roles, groups, and entitlements, and tuned queries to keep synchronization and reporting performant at scale.
- Implemented JWT-based authentication and role-based access control (RBAC) to secure API endpoints across the platform.
- Engineered connector-based integrations to provision, de-provision, and synchronize data with external systems including AWS, Azure, Active Directory, and Microsoft 365.
- Built automated, event-driven and scheduled backend workflows (lifecycle transitions, certification campaigns, and entitlement synchronization) to replace manual processes.
- Implemented full audit logging and compliance reporting across backend services to support enterprise governance requirements.
- Containerized services with Docker and contributed to CI/CD pipelines and Git-based collaborative workflows for reliable, repeatable deployments.
- Supported an enterprise client (NSE) by integrating with and reviewing entitlements in CyberArk PAM, and built React front-end views against the APIs to deliver complete features.

KEY PROJECT

Identity & Access Governance Platform

Django, DRF, JWT, MySQL, Docker, React

- Full-stack platform delivering identity governance and access control; led the Django/DRF backend and secure REST API layer with JWT, RBAC, SSO/MFA, and complete audit trails.
- Developed connectors for provisioning, de-provisioning, and entitlement synchronization, plus automated jobs for compliance enforcement.

SECURITY ACHIEVEMENT

- Okta Bug Bounty (Bugcrowd):** Identified and responsibly disclosed a security vulnerability involving API access persistence after trial expiration; acknowledged and rewarded by Okta.

EDUCATION

Bachelor of Engineering – Electrical & Electronics Engineering

Anna University, India

2020 – 2023

CGPA: 8.5 — First Class with Honors
